Day2 ES Next

Make an acceptable interface to create tabs to display products (title,price,image) by requesting products from the fake API link below using Ajax ES6 **fetch** function:

     https://dummyjson.com/products

Note: Handle the response with promises using **then and catch** methods. or using **async and await**.

bouns

When a product is clicked display the product details by requesting the link

    https://dummyjson.com/products/productID

Note:

- Handle the response with promises using **async and await**.

2.Using Set constructor in js, make a set that has the employee notional id (NID) numbers.

- Try to add repeated NID. What happened?
- Print all NID using spread operator and (for of)

3. create Student Attendance Tracker using Map

    Map(2) {'Ali' => true, 'Sara' => false}

    try set,get ,clear

    print map Object using forEach
