JavaScript Day 1

1. Make an external js file and link it with your html

2. In external js file on your page, show <u>alert</u> for the user that say "Welcome to my first site".

3. Write a currency exchange function that takes two parameters (number of Egyptian pounds and currency symbol) then return it after exchange it to dollar. A*ssume the exchange rate. Two currencies are enough.*

   Calling function should be like:

   - exchangeEgyPound (2000, "$") // function should return 42 $

   - exchangeEgyPound (2000, "€") // function should return 38.7 €

4. Ask user to enter his info first name, birth year, and his mobile number

   - *Take his info using prompt().*

   - Validate them according to the table bellow

parameter	validation
First name	Should be character not a number
Mobile number	Should be number
Birth year	Should be more than 2000

Display all his info with a welcoming message <u>on the page (HTML)</u> like image bellow

welcome dear Ali

your age is 25

your mobile is 01011111110
